

Web Site Testing Checklist

Yuzu Asian Kitchen — yuzuasiankitchen.orderss.co.il

✓ Pass ✗ Fail (see bug ref) □ Not tested — N/A / Out of scope

1. Client Side Testing

1.1. Usability

1.1.1. General

✓	Can the typical user run the system without aggravation?
✓	Is it easy to learn and use?
✗	Is the website searchable? [BUG-011]
✓	Are the instructions on how to use the site clear to the user?
✗	If you follow each instruction does the expected result occur? [BUG-013 (silent failures on coupon/search)]
✓	Is all terminology understandable for all of the site's intended users?
✓	Can you get to your desired location with 4 or less clicks from the Home Page?
✓	Is contact information for the site owner readily visible and available?
✓	If a user wishes to bookmark a page, is the page name easily understandable?
✓	If a user wishes to add a page to Favorites, is the page name easily understandable?
✓	Does your site's Web address appear in the History list?
✓	Is data requested of the user essential to the process?

1.1.2. Design

1.1.2.1. General

✓	Is page layout consistent from page to page?
✓	Is each page organized in an intuitive manner?
✗	Is the page background (color) distraction free? [BUG-010 (header contrast)]

1.1.2.2. Graphics

✓	Are graphics used consistently?
✓	Are graphics optimized for quick downloads?
✓	Are all graphics properly aligned?
✓	Do all the images add value, or simply waste bandwidth?
✓	Are graphics the most efficient use of file size?
✗	Does text wrap properly around pictures/graphics?
✗	Are images displayed at their defined location, correctly sized? [BUG-004 (wrong image in Edit Product modal)]

1.1.2.3.1. Text

✗	Is all text properly aligned?
✗	Do pages print legibly without cutting off text? [BUG-014 (no print stylesheet)]
✓	Are all referenced web sites or email addresses hyperlinked?

1.1.2.3.2. Font

✗	Are fonts too small to read?
✗	Are fonts too large?
✗	Does your solution require special fonts?

1.1.2.3.3. Tables

—	Are all parts of a table present, correctly laid out? <i>[Site has no data tables]</i>
---	--

1.1.2.3.4. Forms

✓	Are all parts of a form present, correctly laid out?
---	--

1.1.3. Links

✓	Is there a link to home on every single page?
✓	Are all internal links performing correctly?
✓	Are all external links performing correctly?
✓	Do all links achieve target as defined?
✗	Are hyperlink colors standard?
✓	Does each hyperlink work on each page?
✓	Does the page you are linking to exist? Any broken links?

1.1.4. Navigation

✓	Is a navigational bar present on every screen?
✓	Is the navigation bar consistently located?
✗	Can a user navigate using text only (Tab, text input)?
✗	Can a user navigate without the use of a mouse?
✓	Can your site be used by the visually impaired?
✓	Does tabbing work consistently, in a uniform manner?

1.2. GUI

1.2.1. Fields

✓	Can text be entered in numeric fields?
✓	Can wildcards be used in searches?
✓	Can spaces and blank values be entered in fields?
✗	Are long strings accepted? <i>[BUG-014, BUG-015 (34,012-char string accepted with no limit)]</i>
✗	Do fields allow for the maximum amount of text to be entered? <i>[BUG-014, BUG-015 (no max-length enforced)]</i>
✓	Are the initial values of checkboxes and radio buttons correct?
☐	Are you restricted to only selecting one radio button in a group?
✓	Do check boxes trigger the desired event?
✗	Is intelligent error handling built into your data verification? <i>[BUG-013 (invalid coupon shows no error); BUG-016 (name field accepts digits/HTML markup with no validation)]</i>

1.2.2. Buttons

✓	Does the Back button work as intended (no new window, fresh trip, sub-second)?
---	--

✗	Does content remain if you go back, or move forward to a new page? <i>[Back preserves cart correctly; Forward does not restore the Checkout step (minor/no bug filed)]</i>
---	--

1.2.3. Other

✓	Can users use copy/paste functionality?
---	---

1.3. Compatibility

1.3.1. Resolution

✓	Does the site look good on 1024x768, 600x800 etc.? <i>[Tested ~500px mobile width, no horizontal overflow]</i>
---	--

1.3.2. Browsers

✓	Have all supported browsers been tested?
✓	Do images display correctly with browsers under test?
✓	Have you verified that fonts are usable on any of the browsers?
✗	Have you printed your site's content from various browsers?
✓	Have you tested graphic images across browsers?

2. Server Side Testing

2.1. Connectivity

—	Is information archived and easily retrievable?
✓	Does the home page load quickly?

2.2. Data Verification

✓	Is the accuracy of stored data sustained?
✗	Has data been verified at the workstation?
✗	Has data been verified at the server?
✗	Have you ensured workstation input yields correct server data?

2.3. Security

✓	Can the accuracy and trustworthiness of the system be confirmed?
✗	Are you prevented from entering the same information multiple times?
✗	Is a unique identifier assigned to each user entering form data?
✗	Does the application include time-outs due to inactivity?
✗	Does the site prompt for user name and password?
✓	Are concurrent log-ons permitted?
✓	Does your server lock out invalid login attempts?
✓	Does the solution require cookies? <i>[Cart uses localStorage, not cookies]</i>
✗	Does the solution work even if users disable cookies?
✓	Has information stored in cookies been verified? <i>[Only consent + Facebook Pixel cookies found; no sensitive data]</i>
✓	Have you checked cookie deletion behavior during/after visit?
✗	Is bookmarking disabled on secure pages?

✓	Does the key/lock display for secure pages?
---	---

2.4. Performance

—	Can the system work effectively for one user, ten, or a thousand?
✓	Does the system operate consistently across environments?
✓	Have you defined standards for response time?
✓	Does the system meet its goals for response time/throughput?

2.5. Load/Concurrent Usage

—	Is the system able to handle extreme or stressful loads?
---	--

2.6. Volume

—	Can the site sustain short periods of usage at high volume?
—	Can the site sustain large transactions without crashing?

2.7. Stability & Recovery

✓	Is the system able to continue operating correctly over time?
✓	Can the site sustain long periods of usage by 1 or multiple users?
✓	Are re-start/recovery mechanisms efficient and reliable after a crash?
✓	If you leave mid-task, does it cancel?
✓	If you lose Internet connection, does the transaction cancel?
—	Does your solution handle browser crashes / network failures / DB inaccessibility?
